

A Network Problem - Part 2

620

Update: smb port has been moved to 8445 from 445 on networking-misc-p2

betta.utctf.live has other interesting ports. Lets look at 8445 this time. By Robert Hill (@Rob H on discord)

betta.utctf.live:8445

Flag

1. Scanned with nmap

nmap -sC -sV -p 8445 guppy.utctf.live

- 2. From the question and the nmap scan we learn that port 8445 is a SMB port
- After looking up we learn SMB is The Server Message Block (SMB) Protocol is a network file sharing protocol by microsoft
- 4. On kali linux we can use smbclient to interact with SMB protocol
- 5. Use smbclient -L <ip> to view shares

```
# smbclient -L //betta.utctf.live/
Password for [WORKGROUP\root]:
                       Type
                                 Comment
        Sharename
       WorkShares
                       Disk
                                 Sharing of work files
       BackUps
                       Disk
                                 File Backups.
       IPC$
                       IPC
                                 IPC Service (Samba Server)
Reconnecting with SMB1 for workgroup listing.
smbXcli_negprot_smb1_done: No compatible protocol selected by server.
protocol negotiation failed: NT_STATUS_INVALID_NETWORK_RESPONSE
Unable to connect with SMB1 -- no workgroup available
```

6. Now that we have share names we can directly access them with smb client the commanded is smbclient //<ip>/<share>

- 7. Once in us Is to list dir and files
- 8. Use cd <dir> and Is to navigate share and find the different files

```
smb: \> ls
                                     D
                                              0 Wed Mar 8 19:45:05 2023
                                     D

```

The file we are looking for is notetoIT, to get it back to our local machine we use the get commanded get <file>

Once we have the file we can leave share, use cat commanded to view it

```

Zoat notetoIT

I don't understand the fasination with the magic phrase "abracadabra", but too many people are using them as passwords. Crystal Ball, Wade Coldwater, Jay Walker, and Holly Wood all basicall y have the same password. Can you please reach out to them and get them to change thier passwords or at least get them append a special character?
